ANNEX 3

Instructions' Card for the "Immigrant Entrepreneurs" - Mohammed

Mohammed

You are Mohammed, from Egypt. You left your wife and children in your country and they are expecting you will get a job and have good economic conditions in order they can join you.

Imagine that the boxes of matches you have in front of you represent the basic life conditions for you to stay in this city, and building a tower with these boxes represents you are succeeded.

The minimum of matchboxes you have to pile is 7. Only after you have 7 matchboxes piled up in a tower (one on top of another) you are in condition to stay, otherwise you have to leave this country.

Now start your challenge, blindfolded and with your less skilled hand! Do not forget to define your goals: How many matchboxes do you think you can pile up?

For an extra box you can pile the tower you improve your living conditions in order to call your family to join you.
